

## Industrial Safety Systems

V200 / V300 Work Station Extended:  
New perspectives in the hazardous point protection

**SICK**  
Sensor Intelligence.

- Simplest integration
- Intuitive one button set up
- One system fits all protective field sizes
- Flexible protective field geometries
- Automatic alignment
- Restart/reset, EDM integrated

## Overview of technical specifications

Maximum protective field range	2.12 m <sup>1)</sup>
Minimum protective field size	40 cm x 40 cm <sup>1)</sup>
Maximum protective field size	150 cm x 150 cm <sup>1)</sup>
Resolution	20 mm, 24 mm, 30 mm <sup>1)</sup>
Response time	20 ms
Type	Type 3 (IEC 61496)
Safety integrity level	SIL 2 (IEC 61508)
Performance Level	PL d (EN ISO 13849)

<sup>1)</sup> Depending on resolution set

## Product description

V300 Work Station Extended – the reduction course for hazardous point protection. The V300 Work Station Extended is a sensor based on innovative camera technology, developed for monitoring hazardous points on typically rectangular action openings - with just one component, mounted in a corner of the safety area, saving space and in a protected location.

The “one sensor fits all sizes” concept puts an end to the numerous types – one sensor combined with the suitable resolution set

covers the most diverse protective field sizes.

In combining two V300 Work Station Extended the protective field size can be enhanced up to 300 cm x 150 cm.

Reduces costs due to

- No variants: simplified stock-keeping
- One component: quick installation and commissioning, minimum use of resources
- Minimum power consumption

## Applications

→ You can find more applications using the application finder at [www.mysick.com](http://www.mysick.com)

- Hazardous point protection in semi-automatic work processes
- Protecting of test, assembly and inspection stations
- Service openings with sporadic access
- Presence detection

Hazardous point protection on a semi-automatic assembly machine.

Hazardous point protection on a semi-automatic assembly machine. The combination of two camera systems can increase ergonomics.

## Ordering information

Delivery V300 Work Station Extended:

- Camera
- Teach-in pin
- Label "Important Information"
- Operating instructions on CD-ROM
- Easy Installation Guide (instructions for quick commissioning), in several languages

A resolution set has to be ordered separately!

Type	Part number
V30W-0101000	1041542

### General data

Protection class	III (EN 50178)
Enclosure rating	IP 54 (IEC 60529)
Safety related parameters	
Type	Type 3 (IEC 61496)
Safety integrity level	SIL 2 (IEC 61508) SILCL2 (EN 62061)
Category	Category 3 (EN ISO 13849)
Performance Level	PL d (EN ISO 13849)
PFHd (mean probability of a dangerous failure per hour)	$3,2 \times 10^{-9}$
T <sub>M</sub> (Mission Time)	20 years (EN ISO 13849)
Ambient operating temperature from ... to	0 °C ... +50 °C
Wave length illumination	850 nm
Dimensions	90 mm x 50 mm x 90 mm
Maximum protective field range	2.12 m <sup>1)</sup>
Minimum protective field size	40 cm x 40 cm <sup>1)</sup>
Maximum protective field size	150 cm x 150 cm <sup>1)</sup>
Aspect ratio protective field	1:1 to 2:1
Resolution	20 mm, 24 mm, 30 mm <sup>1)</sup>
Response time	20 ms

<sup>1)</sup> Depending on resolution set

## Electrical data

Connection type	System connection	M12 x 8
Supply voltage		24 V DC
Power consumption	Including maximum output load	Max. 690 mA
	At 24 V without output load	165 mA
Number of inputs	External device monitoring	1
	Restart interlock	1
	Teach/Sync	1
Switching outputs		2
Switching current		6 mA ... 250 mA

## Dimensional drawings

## Connection diagrams

### V300 Work Station Extended on UE10-30S with external device monitoring (EDM) and internal restart interlock

#### Task

The V300 Work Station Extended safety camera system can be integrated into a relay controller/contactors controller with the aid of the UE10-30S safety relay. Operation is with external device monitoring (EDM) and internal restart interlock.

#### Function

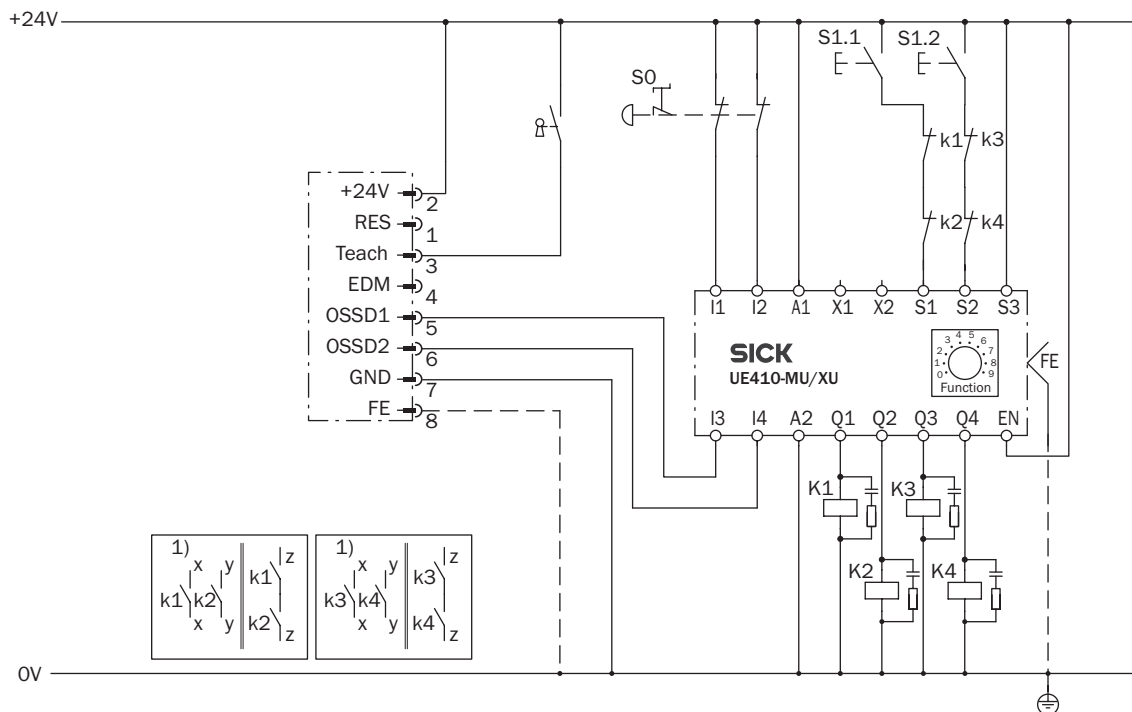

If the light path is clear and there are no errors in the quiescent state of the UE10-30S, the status LED on the V300 Work Station Extended flashes (Reset required). The system is ready for switch on and waits for an input signal/switch on signal. The

system is enabled by pressing and releasing the button S1. The outputs OSSD1 and OSSD2 carry power. The UE10-30S is switched on. On interruption of the light path, the UE10-30S is de-energized by the OSSD1 and OSSD2 outputs.

#### Possible faults

Cross-circuits and short-circuits on the outputs OSSD1 and OSSD2 are detected and will result in "lock-out". Malfunctions on the UE10-30S are detected. The shutdown function is retained. If the button S1 is tampered with (e.g. by jamming) the system will not re-enable the output circuits.

V300 Work Station Extended on Flexi Classic with external device monitoring (EDM) and with restart interlock both for V300 Work Station Extended as well as for emergency switching off

### Task

The V300 Work Station Extended safety camera system can be integrated into a relay controller/contactor controller with the aid of the modular Flexi Classic (UE410-MU with expansion UE410-XU) safety controller. Operation is with external device monitoring and internal restart interlock on the V300 Work Station Extended as well as restart interlock for the emergency switching off button.

### Function

When the light path on the V300 Work Station Extended is clear and the input conditions on the Flexi Classic are valid, the system is ready for switch on and waits for an input signal/switch

on signal. The system's corresponding logic path is enabled by pressing and releasing the related button S1. The related output on the Flexi Classic carries power. If the input conditions are no longer met, then the related outputs on the Flexi Classic shut down.

### Possible faults

Cross-circuits and short-circuits on the connection cable for the V300 Work Station Extended are detected and result in "lock-out". Malfunctions on the contactors K1 to K4 are detected. The shutdown function is retained. If the button S1.x is tampered with (e.g. by jamming) the system will not re-enable the output circuits.
